

ST. AUGUSTINE IN TEXAS

WARM-SEASON LAWN CALENDAR

Weather overrides the month. Repair during active warmth; reduce work as growth slows. Prepare water equipment before your first local freeze, even if earlier than shown.

01 JANUARY Check winter conditions Protect frosted or saturated turf. Check moisture during extended dry weather. Check: Cold-weather browning alone is not a call for nitrogen.	02 FEBRUARY Prepare for growth Repairs usually use sod or plugs, not generic lawn seed. Check: A warm spell does not prove sustained green-up.	03 MARCH Audit before the season Inspect sprinkler heads and compare coverage before setting a summer schedule. Check: Check local watering restrictions.
04 APRIL Wait for steady growth Resume mowing as needed at a cultivar-suitable height. Inspect irrigation coverage. Check: Nitrogen and coring need suitable active growth, not a date.	05 MAY Plan a warm repair Repair only in suitable growing conditions, using sod or plugs that match the cultivar; protect new rooting. Check: Confirm the cultivar's seed, sod or plug requirements.	06 JUNE Watch runoff Time any runoff during a short irrigation test. Check: Split cycles where soil cannot absorb a long run.
07 JULY Watch heat and water Check rainfall, root moisture and sprinkler coverage. Adjust care to the lawn's actual response. Check: Standard and dwarf cultivars have different cutting heights.	08 AUGUST Leave recovery time Inspect wear and thinning. Plan remaining repairs only if enough warm growing time remains. Check: Do not begin major work as growth is shutting down.	09 SEPTEMBER Reassess the season Reduce mowing frequency if growth slows. Review winter annual weeds and upcoming local restrictions. Check: Avoid late nitrogen that forces growth before cold weather.
10 OCTOBER Follow slowing growth Reassess irrigation as growth and weather change. Check: Do not keep summer settings automatically.	11 NOVEMBER Adjust to the site If growth has slowed, reduce inputs. Winterize irrigation where freezing is expected. Check: In frost-free areas, follow continued growth and rainfall.	12 DECEMBER Keep a useful record Record this year's green-up, repairs and water use. Inspect dry or repeatedly wet areas. Check: Do not assume every warm-season lawn is dormant now.

Record your location, shade and water limits. A plan for one part of Texas is not a statewide prescription.

LAWN AREA: _____ GRASS / CULTIVAR: _____

Use current local advice and product labels. New seed, sod and plugs need separate establishment care. This is a planning sheet, not a monthly treatment schedule.
